

DURASER™ PERFORATED COMPOSITE WIND CURTAINS

THE PROPERTIES OF DURASER PERFORATED COMPOSITE WIND CURTAINS

- 1) Both sides of the panels are produced with the Diamond Shield UV protection technology
- 2) The panels are highly resistant to corrosion
- 3) They have high mechanical strength due to the special fiberglass matrix
- 4) They are produced according to the FS<25 ASTM E84 fire standards
- 5) They are resistant to 115 km/hr wind load
- 6) They can be produced in any color

APPLICATIONS

- Coal fired plants
- Ports
- Coal Storage and Handling Facilities
- Loading Areas of Various Minerals
- Ash and Dust Containment
- Construction and Demolition Sites
- Cement Factories
- Concrete Manufacturing Facilities
- Refill / Excavation Sites
- Environmental
- Waste Storage Areas
- Recycling Sites
- Mining
- Steel Industry
